Foreword

PREMISES LICENCE DETAILS	Gloucester Coal Seam Gas Project Bucketts Way Gloucester NSW 2422 Environment Protection Licence 20358
LICENCEE	AGL Upstream Investments Pty Limited (AGL)
LICENCEE'S ADDRESS	Locked Bag 1837, North Sydney, NSW 2060
MONITORING DATE	16 August 2016
MONITORING BY	EMM, on behalf of AGL
ANALYSIS BY	ALS Laboratory, Smithfield (Work order: ES1618088)
DATE AGL OBTAINED DATA	29 August 2016
REPORT DATE	5 September 2016 Revision B (Addendum): 15 September 2016
REPORT PREPARED BY	James Duggleby, Senior Hydrogeologist

Changes in Revision B (Addendum): correction of name of personnel who undertook monitoring (EMM).

≌AGL

Introduction

On 4 February 2016 AGL Upstream Investments Pty Ltd (AGL) announced that the GGP will not proceed to final investment stage. AGL will relinquish Petroleum Exploration Licence (PEL) 285 to the NSW Government and will commence a comprehensive decommissioning and rehabilitation program for well sites and other infrastructure in the Gloucester region.

A dedicated water monitoring network is in place which has enabled the collection of baseline water level and water quality data for the different groundwater and surface water systems within the Gloucester Basin. There are currently more than 50 dedicated water monitoring locations and more than five years of baseline monitoring (water levels and water quality) across the Gloucester Basin.

This Monitoring Report relates to the water monitoring activities specified in Part 5, Monitoring and Recording Conditions, of the Environment Protection Licence 20358. This report relates specifically to the monitoring surrounding the Tiedman Irrigation Program, and details monitoring results from quarterly water sampling event at the Tiedman Irrigation Program (16 August 2016).

As per the Licence, the monitoring encompasses the monitoring points at the locations as shown in Table 1 and Figure 1. The specific analytes and frequency tested are shown in Table 2. The monitoring results for this reporting period are shown in Table 3, Table 4, and Table 5.

The monitoring points that are the subject of this report are part of the GGP groundwater monitoring network, as described in AGL's Water Management Plan for the Tiedman Irrigation Program (AGL, 2012a) and Soil Quality Monitoring and Management Program (AGL, 2012b)). Water monitoring results for the irrigation program are presented in a baseline water monitoring report (PB, 2013a) and six-monthly compliance reports (PB, 2013a, 2013b, 2014a, 2014b, 2015a, and 2015b).

The following sampling methods were used to obtain surface water and groundwater samples:

- Submersible 12V pump at the groundwater monitoring bores screened within relatively permeable geological materials: TMB01, TMB02 and TMB03. A minimum of three well volumes was purged prior to sampling.
- Submersible 12V pump at the seepage monitoring bores TMB04 and TMB05 which are screened within material of very low permeability. The physical parameters of the purged groundwater were initially tested, then the bores were purged dry and if any inflow was observed within 12 hours then physical parameters were tested again and a sample taken for analysis.
- Disposable bailer at the shallow perched soil water piezometers (with piezometers purged dry and if any inflow was observed within 12 hours then physical parameters were tested again and a sample taken for analysis).
- Micro-purge low-flow sample pump for groundwater monitoring bores S4MB01, TTMB02 and TCMB01 screened within material of relatively low permeability.
- Grab sample using a telescopic sampler for dam water samples.

EC and pH were monitored during purging to ensure that they had stabilised prior to sample collection. The water quality samples are analysed by an external NATA certified laboratory (ALS Environmental, Smithfield), in accordance with the EPA Approved Methods Publication "*Approved Methods for the Sampling and Analysis of Water Pollutants in New South Wales*" (EPA, 2004), with the exception of calcium, which underwent filtration rather than acid extraction as a preliminary treatment prior to analysis.

This report is prepared in accordance with the *Requirements for Publishing Pollution Monitoring Data* (EPA, 2012) (Publication Requirements).

The remaining water and land monitoring points in EPL 20358 will be reported in subsequent reports when the requirement for monitoring is triggered.

More information on the groundwater monitoring of the GGP is available on the project website: <u>agl.com.au/Gloucester</u>

Notes:

Special Frequency 1 - Quarterly if inflow within 12 hours of purging dry.

Special Frequency 8 - Every 6 hours. Note these monitoring points may form part of AGL's rehabilitation work, and should a monitoring point be rehabilitated, than monitoring will no longer be required from that point. Special Method 4 - By calculation

Special Method 1 - Manual dip

Special Method 5 - Automated datalogger

Shaded grey - not required to be analysed

^aEPL20358 (issued 4 May 2016) contains inconsistancies in the required Units of Measure for Toluene, Ethyl Benzene and Xylene. For consistency with laboratory data BTEX concentrations are reported here in micrograms per litre. ^bWeekly sampling from Monitoring Point 29 (Tiedman East Dam) only required if/when flowback water from the Waukivory Pilot Project is transferred to TED.

Page 8 of 10

Shaded grey = not required to be analysed ^a measured with calibrated field meter ^b No water present at this location at the time of sampling na - not analysed as no sample collected

Table 5: Continuous water level monitoring results for monitoring points 30, 31, MAGL 39 - 44 for the period 24 May 2016 – 16 August 2016

Monitoring point	30	31	39	40	41	42	43	44					
Location	TMB04	TMB05	TMB01	TMB02	TMB03	S4MB01	TCMB01	TTMB02					
Data type		Standing water level											
Units		mAHD											
Data date range	2	24/05/2016 - 16/08/2016 25/05/2016 - 16/08/2016											
Date data downloaded		16/08/2016											
Date data supplied to AGL		29/08/2016											
Monitoring frequency required by EPL 20358	Every 6 hours	Every 6 hours	Every 6 hours	Every 6 hours	Every 6 hours	Every 6 hours	Every 6 hours	Every 6 hours					
Actual monitoring frequency	Every 6 hours	Every 6 hours	Every 6 hours	Every 6 hours	Every 6 hours	Every 6 hours	Every 6 hours	Every 6 hours					
No. of times measured during monitoring period	335	335	335	335	335	333	334	334					
Min. value	111.66	110.2	102.52	102.60	103.50	111.11	113.50	113.57					
Mean value	113.26	113.16	102.81	102.74	103.66	113.09	113.76	113.88					
Median value	113.28	113.24	102.78	102.73	103.65	113.10	113.76	113.88					
Max. value	113.34	113.32	103.39	102.99	103.86	113.17	113.80	113.93
