- Does not take into account the potential and current individual investment objectives or the financial situation of investors.
- Was prepared with due care and attention and is current at the date of the presentation.
- Actual results may materially vary from any forecasts (where applicable) in this presentation.
- Before making or varying any investment in securities in AGL Energy Limited, all investors should consider the appropriateness of that investment in light of their individual investment objectives and financial situation and should seek their own independent professional advice.

### Agenda

>

>

- Australia's Domestic Energy Markets
  - Climate Change and Transformational Policies
  - > Retail Price Controls
    - Conclusions

#### Australia's Domestic Energy Markets

**MAGL** 

#### Australia's energy resources

Well positioned with a large diversified resource base

¥.			
Fuel	Reserves	Export Demand	CO2
Black Coal	8.6% global reserves (213 years current production)	Significant	Medium-High
Brown Coal	500 years at current production	None	High
Gas	1.4% global reserves (68 years current production)	Significant	Low-Medium
Uranium	30% global reserves	Significant	None
Renewable	Significant wind, solar, wave and geothermal reserves	None	None

### Managing Australia's carbon risk

Australia's heavy reliance on coal for energy means our economy is more exposed to a global carbon price

<sup>»</sup> Australian Financial Review Energy Conference

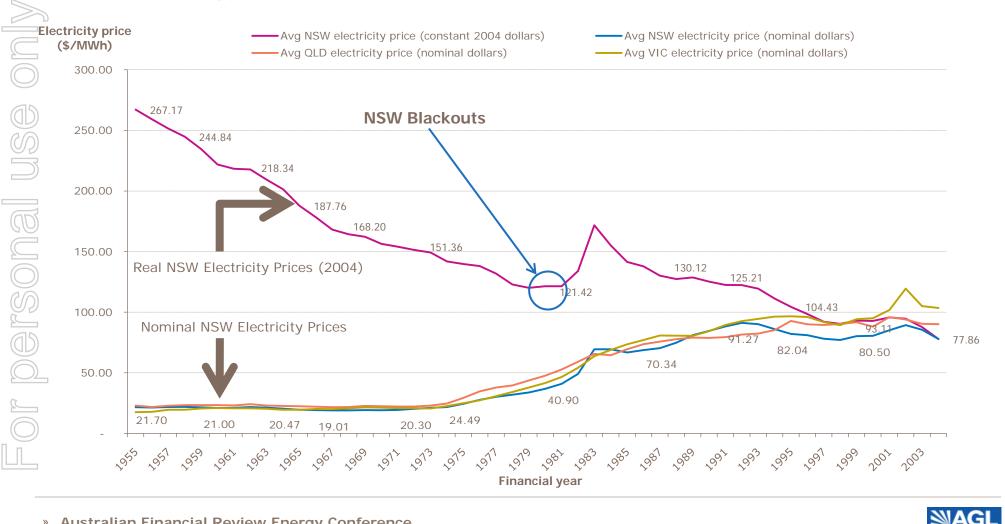

#### Australia's greenhouse gas emissions 8 Australia's greenhouse gas emissions are mostly produced by the senergy sector. The energy sector will be most impacted by climate change policy Source National Greenhouse Inventory Report (2006) 250 The 200 Mt of emissions from power generation 35% comes from just 85 sites. This makes them a key 200 policy target. ## ....and the funding challenge is significant

The Australian energy market is heavily geared and many facilities will need to be refinanced in the short-term

Energy sector capital requirement: next five years	
Refinancing – Power generation	\$19 billion
Capital expenditure on existing and new generation assets	\$18 billion
Refinancing – Energy networks	\$29 billion
Capital expenditure on existing and new network assets	\$31 billion
Initial capital required to purchase emission permits	\$9 billion
	\$106 billion

# Climate change is a long term issue requiring long term solutions Policy settings must ensure a smooth transition

- Adequate transitional arrangements for generators and EITE industries
- Meaningful but appropriate emission reduction targets
- Assistance to low income households
- Retail price controls should be removed
- While price controls remain, it is critical regulators pass through all costs to ensure smooth transition and security of supply is maintained

>

» Australian Financial Review Energy Conference

#### **Retail Price Controls**

# **Retail Price Controls**

Ensuring all climate change related costs are passed through to end consumers is critical to achieving Climate Policy Objectives

- Price signals will drive energy efficiency
- > The wrong price settings will stifle new investment, compromise climate policy objectives and risk security of supply
  - Removal of price controls the most effective means of determining an efficient retail price
  - Robust, competitive markets will deliver climate policy objectives at efficient prices
  - Regulators are being asked to perform what will become an extremely difficult task

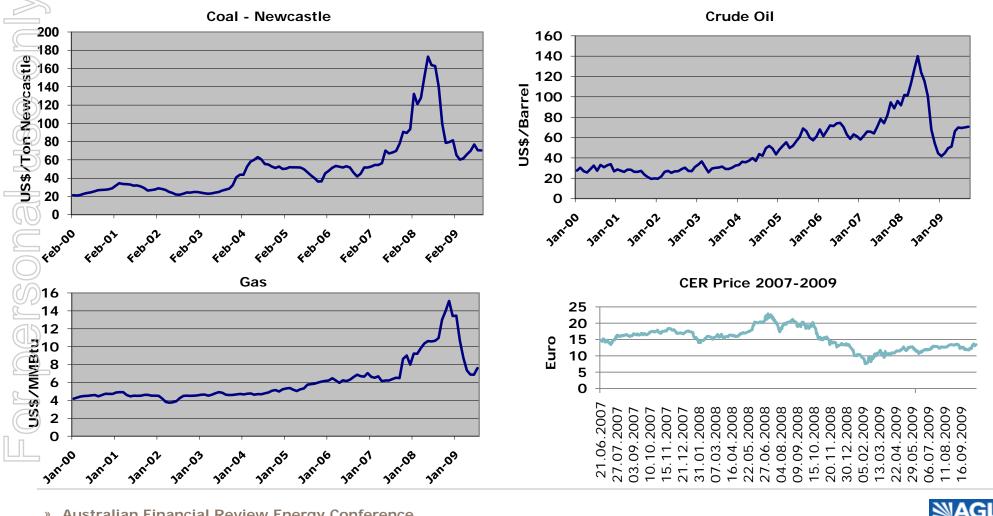

17

### Future prices impacted by numerous variables

18

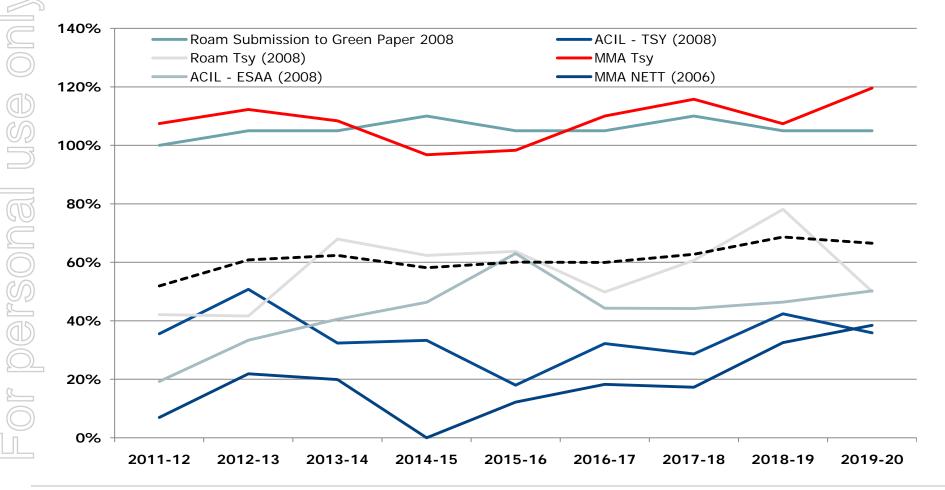

Core variables are changing substantially. Key input costs increasingly linked to international prices

Australian Financial Review Energy Conference **»** 

October 2009 »

#### Future prices impacted by numerous variables Estimated pass through of carbon prices varies substantially across modelling studies

### Conclusions

- Climate change policies will transform the Australian energy sector
- Significant investment is required over the next decade
- The investment task is substantial
  - » \$106 billion in financing and refinancing across the supply chain
  - » \$37 billion in power generation
  - » Heavy reliance on foreign capital
  - Policy settings must ensure a smooth transition
  - Removing retail price controls one of the most important issues
